IDEATION PHASE

DEFINE THE PROBLEM STATEMENTS

Project: Automated Network Request & Fulfillment Management System

STUDENT NAME	Bantupalli Niharika	TECHNOLOGY / PLATFORM	ServiceNow

1. Customer Problem Statements

ID	CUSTOMER	GOAL	CHALLENGE	ROOT CAUSE	CUSTOMER IMPACT
PS-1	An employee or end user who needs a network service	Submit a network request with complete and accurate information	The request may be unclear or contain incomplete information	Requests are submitted through different channels without a consistent, standardized form	Uncertainty about whether all required details have been provided
PS-2	A requester who has submitted a network request	Track the progress and current status of the request	The requester may not know whether the request is awaiting approval or being processed	There is limited visibility into the request lifecycle and status updates	Confusion and uncertainty about when the request will be completed
PS-3	A member of the Network Fulfillment Team	Receive and process network requests efficiently	Requests may require manual review, checking, and assignment	Request details, approvals, and fulfillment activities are not connected through a coordinated workflow	Delays and increased workload caused by manual activities

PROBLEM DEFINITION CANVAS

A consolidated view of the user, problem, need, and business impact

USER	PROBLEM	NEED	IMPACT
Employees and end users who request network-related services such as Wi-Fi, LAN, VPN, and other connectivity services.	Network service requests may be submitted through inconsistent or unclear processes. This can result in incomplete information, limited status visibility, and delays in processing.	A centralized ServiceNow-based request process that guides users, captures all required information, and coordinates approvals, assignment, and fulfillment.	Incomplete requests and disconnected activities can increase processing time, create additional manual work, and delay network service fulfillment.

2. How Might We?

How might we provide employees with a simple, centralized ServiceNow experience that captures complete network request information, provides clear status visibility, and coordinates the approval and fulfillment process?

3. Problem Statement Summary

The current network request process can be fragmented across multiple channels, making it difficult to collect complete request details, track progress, and coordinate fulfillment activities. The project aims to address these challenges through a centralized ServiceNow solution that standardizes request submission, improves visibility, and supports a coordinated approval and fulfillment workflow.
