USER ACCEPTANCE TESTING (UAT)

Date	5 September 2026
Student Name	Bantupalli Niharika
Project Name	Automated Network Request Management
Maximum Marks	

UAT TEST CASES

UAT ID	Test Scenario	Acceptance Criteria	Result
UAT-01	Access the Service Portal	The Service Portal opens successfully and is accessible to the user.	**Accepted**
UAT-02	Locate the Network Request	The Network Request catalog item is visible and can be selected.	**Accepted**
UAT-03	Open the Request Form	The Network Request form opens and displays the available input fields.	**Accepted**
UAT-04	Select the Device Type	The user can select a valid device type from the available options.	**Accepted**
UAT-05	Select the Connection Type	The relevant connection-type options are displayed and can be selected.	**Accepted**
UAT-06	Validate Mandatory Fields	The form prevents submission when required fields are left incomplete.	**Accepted**
UAT-07	Submit the Network Request	The request is submitted successfully and a request record is created.	**Accepted**
UAT-08	Verify the Approval Process	The submitted request is routed to the approval process.	**Accepted**
UAT-09	Verify Network Task Creation	A network task is generated and assigned for the required action.	**Accepted**
UAT-10	Verify the End-to-End Workflow	The request proceeds through the defined workflow to completion without a blocking issue.	**Accepted**

UAT CONCLUSION

Based on the recorded results, all 10 listed User Acceptance Testing scenarios were marked as Accepted. The tested workflow covers portal access, request selection and submission, mandatory-field validation, approval routing, network task creation, and end-to-end processing. The results indicate that the workflow meets the acceptance criteria documented for the scope covered by this UAT.
